PERSONAL PORTFOLIO WEB APPLICATION

Mohammed Alnasr
Assignment 4 – Web Development Project

PROJECT OVERVIEW

This project is a personal portfolio web application designed to showcase skills, projects, and professional experience in an engaging digital format. Built entirely using HTML, CSS, and JavaScript, it represents the culmination of all previous course assignments into one cohesive, functional website.

The application combines fundamental web technologies to create a seamless user experience. HTML provides the structural foundation, CSS delivers modern styling and responsive layouts, while JavaScript enables dynamic functionality and user interactions throughout the site.

A key focus of this project was creating an interactive and user-friendly design. Every element was carefully considered to ensure intuitive navigation, clear visual hierarchy, and an enjoyable browsing experience for visitors exploring the portfolio content.

KEY FEATURES

- Project search, filter, and sorting
- GitHub API integration
- Dark mode (saved using localStorage)
- Visitor name storage
- Contact form with validation
- Time-on-site counter

TECHNOLOGIES USED

01

HTML
Provides the structural foundation and semantic markup for the entire web application.

03

JavaScript
Powers all interactive features, form validation, and dynamic content manipulation.

02

CSS
Handles all visual styling, responsive layout design, and dark mode theming.

04

GitHub API & localStorage
Enables dynamic data fetching and persistent state management across sessions.

CHALLENGES

- COMBINING SEARCH, FILTER, AND SORTING LOGIC
- WORKING WITH GITHUB API
- HANDLING FORM VALIDATION CORRECTLY

CONCLUSION

- BUILT A COMPLETE AND FUNCTIONAL WEB APPLICATION
- IMPROVED JAVASCRIPT AND PROBLEM-SOLVING SKILLS
- FUTURE IMPROVEMENTS:
  - ADD BACKEND FOR FORM SUBMISSION
  - IMPROVE UI DESIGN
  - ADD AUTHENTICATION SYSTEM

THANK YOU
